

UNHaRMED

Accounting for society's influence on future disaster risk and how to develop proactive risk management strategies through integrated dynamic risk assessments

RAF 2019

Holger R Maier/ The University of Adelaide

Graeme Riddell, Hedwig van Delden, Roel Vanhout, James Daniell, Sofanit Araya, Aaron Zecchin, Graeme Dandy, Jeff Newman

| Two driving principles

Prevention is better than cure

“Better to build a fence at the top of a cliff, than park an ambulance at the bottom”

Helen Clark 2015 Sendai

Tomorrow's risk is built today

Tomorrow's risk is being built today. We must therefore move away from risk assessments that show risk at a single point in the present and move instead towards risk assessments that can guide decision makers towards a resilient future.

Global Facility for Disaster Reduction and Recovery (2016)

The making of a riskier future: How our decisions are shaping future disaster risk

**Future
RISK**

Things we generally
can control

- Land use planning
- Land management
- Building codes
- Structural measures
- Community education

Things we generally cannot control

- Climate change
- Population growth
- Global economy
- Technological disruption

Things we generally can control

- Land use planning

- Structural measures
- Community education

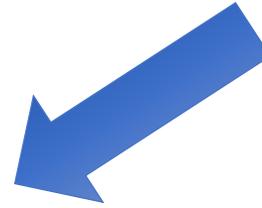

Things we generally cannot control

- Climate change
- Population growth
- Global economy
- Technological disruption

Things we generally can control

- Land use planning
- Land management
- Building codes
- Structural measures
- Community education

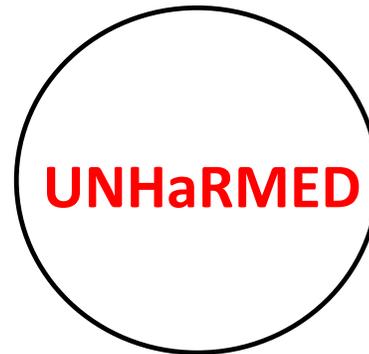

HOW DO WE QUANTIFY IMPACTS?

HOW DO WE OBTAIN EVIDENCE / DATA TO SUPPORT DECISION-MAKING?

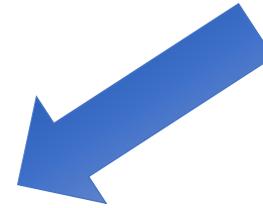

Things we generally cannot control

- Climate change
- Population growth
- Global economy
- Technological disruption

Things we generally can control

Unified Natural Hazard Risk Mitigation Exploratory Decision support system

HOW DO WE QUANTIFY IMPACTS?

HOW DO WE OBTAIN EVIDENCE / DATA TO SUPPORT DECISION-MAKING?

Things we generally cannot control

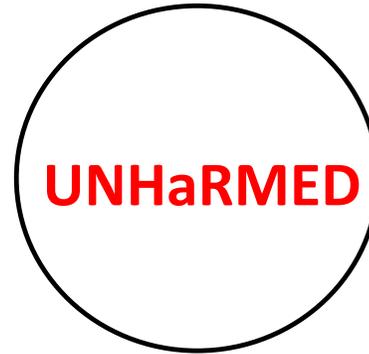

- Climate change
- Population growth
- Global economy
- Technological disruption

Things we generally can control

- Land use planning
- Land management
- Building codes
- Structural measures
- Community education

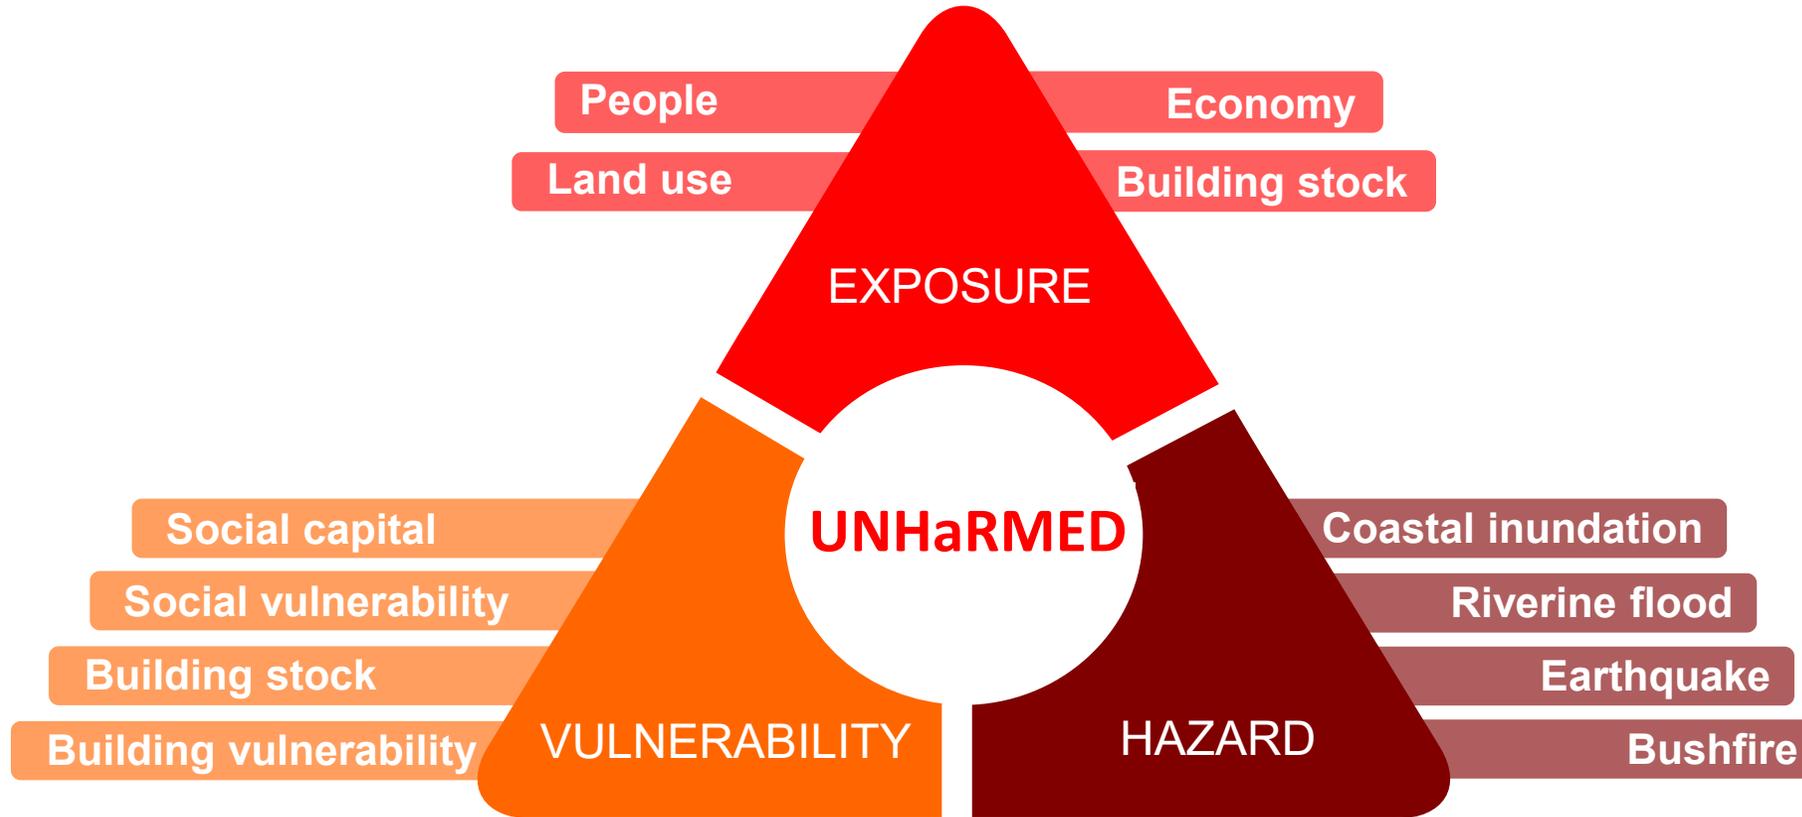

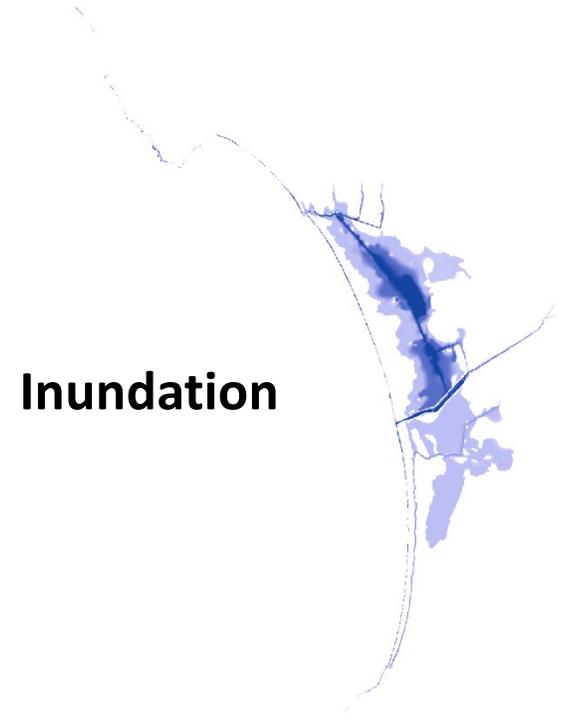

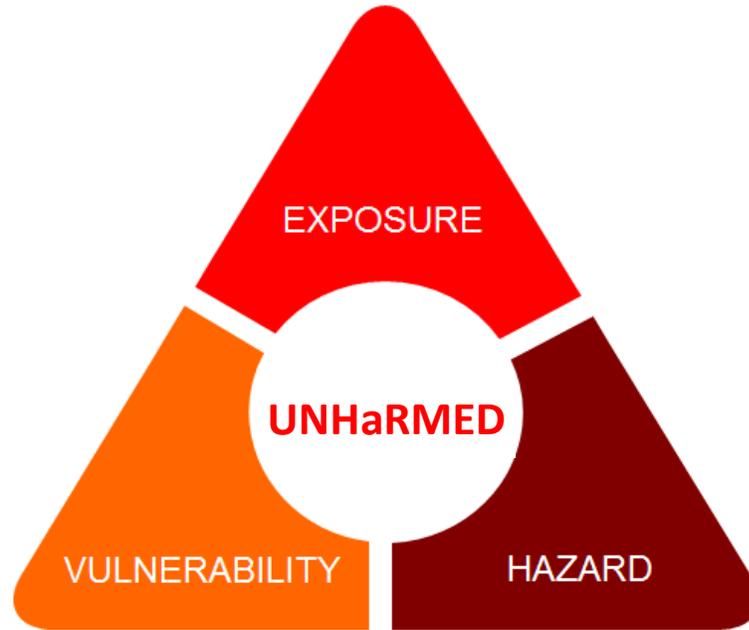

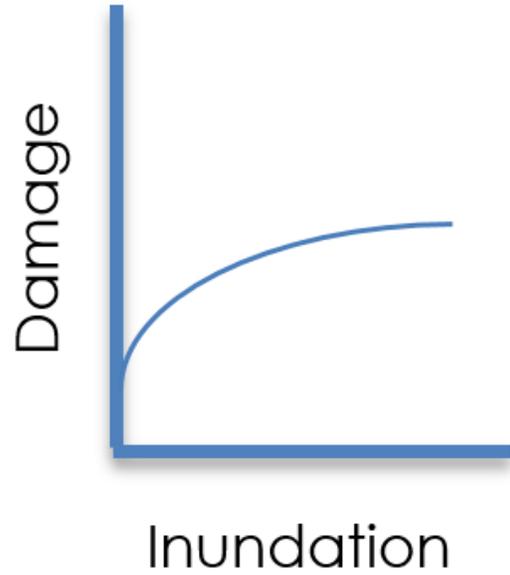

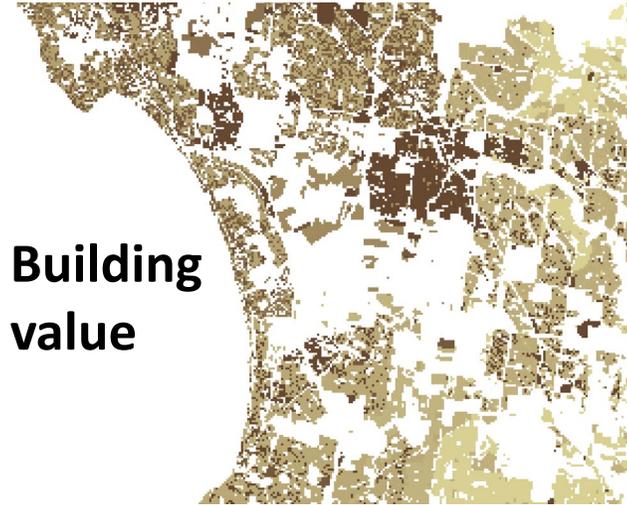

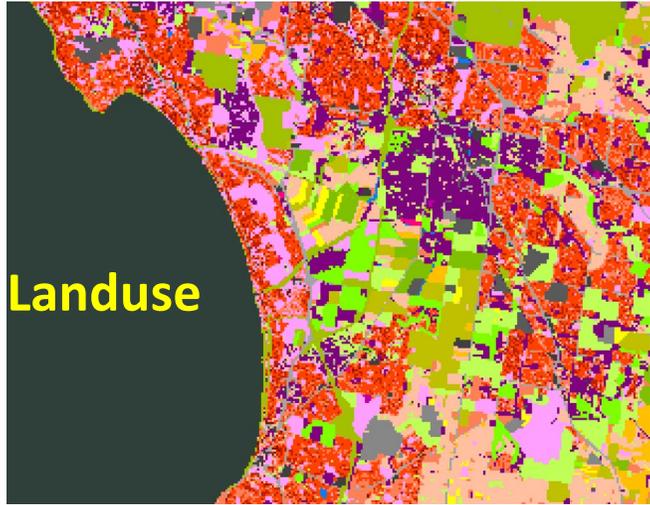

HOW DO WE QUANTIFY IMPACTS?

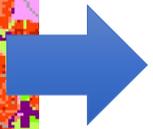

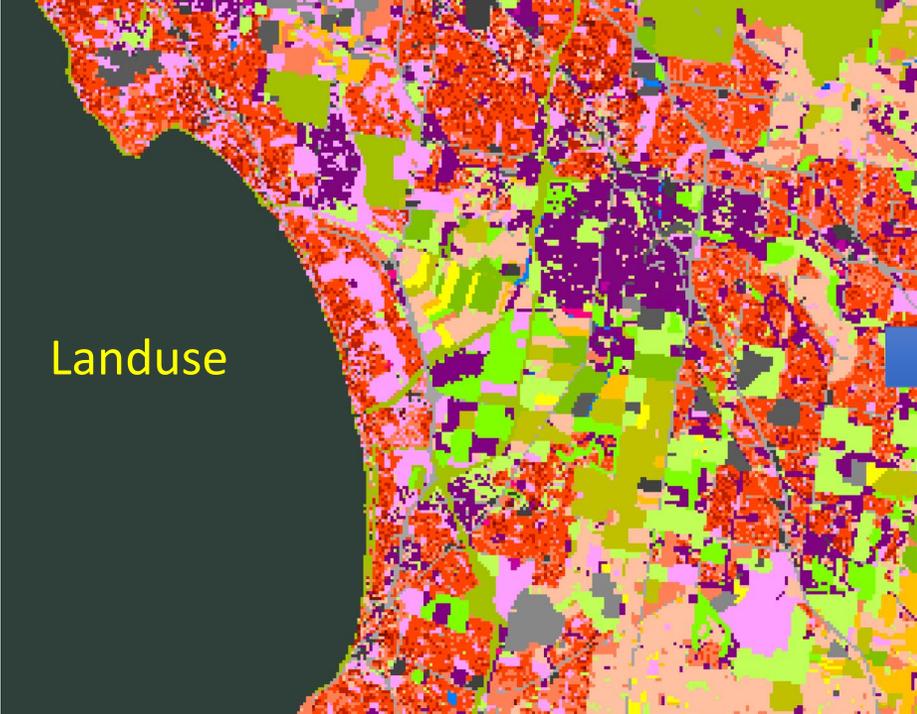

HOW DO WE OBTAIN EVIDENCE / DATA TO SUPPORT DECISION-MAKING?

We can assess how risk will change and what risk reduction portfolios are most effective in different plausible future worlds using a “policy wind tunnel”

- **Bureau of Meteorology – Heatwave Impact (Physical Environmental Analysis Network)**

UNHaRMED

A tool for pro-active disaster risk assessment and reduction planning

- Aims:
 - Improve thinking about risk into the future;
 - Better manage and minimise risk;
 - Position organisations to best achieve this and lobby others.

UNHaRMED

A tool for pro-active disaster risk assessment and reduction planning

- Aims:
 - Improve thinking about risk into the future;
 - Better manage and minimise risk;
 - Position organisations to best achieve this and lobby others.
- Considers:
 - Spatial variability in risk
 - Long-term dynamics and uncertainties of hazard, exposure and vulnerabilities
 - A range of risk-reduction options and their effectiveness

UNHaRMED

A tool for pro-active disaster risk assessment and reduction planning
